

Seazona Announces Bite-Finder Integration, Bringing AI Automation Directly into Dental Lab Workflows

2/18/2026 — Seazona, a leading dental laboratory management software provider, today announced the release of its integration with Bite-Finder, an AI-driven dental automation platform designed to improve case precision and streamline digital workflows.

The integration allows dental laboratories to process digital 3D scan files through Bite-Finder directly from within Seazona’s case management system.

From the **Files** tab of any case, users can submit STL files for AI processing and automatically download the Bite-Finder output — all without leaving Seazona.

By eliminating manual file transfers and disconnected workflows, the integration helps labs save time, reduce friction, and improve case consistency.

“Our focus is always on efficiency and usability,” said Ron De Rose, Chief Technology Officer, Seazona. “Integrating Bite-Finder directly into Seazona gives labs access to advanced AI tools inside the platform they already rely on every day.”

The Bite-Finder integration is available to Seazona laboratories immediately.

About Bite-Finder

Bite-Finder is an AI-powered dental automation platform developed inside a working dental lab. Its mission is to enhance case precision, reduce manual adjustments, and modernize traditional workflows — enhancing thousands of cases every day, bite by bite.

About Seazona

Seazona is a comprehensive dental lab management system serving laboratories in the US, Australia, the UK, and worldwide. From case tracking and client portals to billing and integrations, Seazona provides everything labs need to run efficiently in one centralized platform.
